

A new GIANT for the heart of Europe

One of the biggest 3-Roll Benders in the world will go to the Netherlands

Dear Muster Mustermann,

When it comes to roll really heavy plates, HAEUSLER is the one and only reliable choice.

Just recently HAEUSLER has been selected as the supplier for the biggest 3-roll plate bending machine in Europe, with a capacity of more than 6'300 tons top roll force. This enables the customer to bend wall thicknesses of 300 mm and more. In addition to this enormous power, the machine will be also equipped with special-customized options, which makes this machine absolutely unique in the world. Yet another great reference that we are very proud of.

Moscow

“ At the end, quality and experience win the decision. On the world market, European companies have to offer high level quality products at competitive prices to win businesses. This statement is valid for us (Haeusler) as well as for our customers.

Thanks to close cooperation with the end-user, a “Maybe” project was changed to a “Yes” project. This was possible thanks to the willingness of all parties in finding a win/win solution. We are proud to have been chosen by a European based company for building their very large plate bending machine.

Such project shows that competitive investment, quality, reliability and accuracy are compatible. The key to such success lies in working hand in hand with the customer towards a common goal, like a family.
