Roll bending takes press forming

HAEUSLER HYBRID Technology (HHT)

General capacity of HHT and overview of the two bending processes

Pipe diameter	from 16" up to 60"
Wall thickness	from 6.8 up to 50 mm
Pipe length	from 9 up to 24 m
Productivity	up to 20 pipes/hour
Output	200 000 up to 1 000 000 metric tons/year

- No limits in pipe lengths as top roll is supported over whole length
- Low tooling cost as all production range can be executed with 1 to 2 tools only
- No limits in wall thickness of pipe as press forming can cover all diameter thickness ratio
- High output of up to 20 pipes/hour due to fast rolling process
